GOALS

E9 ultra-high modulus glass fiber represents Jushi's

latency (ms)

[illegible]

Age Group	Percentage
18-24	10%
25-34	15%
35-44	20%
45-54	25%
55-64	20%
65-74	15%
75-84	10%
85+	5%

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

Figure 6

Panel A shows a bar chart of the number of cases by age group (0-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70-74, 75-79, 80-84, 85-89, 90-94, 95-99) and sex (Male, Female). The y-axis ranges from 0 to 100. Panel B shows a bar chart of the number of cases by age group (0-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, 65-69, 70-74, 75-79, 80-84, 85-89, 90-94, 95-99) and sex (Male, Female). The y-axis ranges from 0 to 100.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups.

The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

E-GLASS FIBER COMPOSITES

REVOLUTIONARY A NEW SOLUTION FOR THE FIBER COMPOSITES

BENEFITS OFFERED BY E-Glass FIBER

Higher Modulus

A modulus of 72 GPa, 10% higher than traditional E-glass.

Higher Strength

A tensile strength of 3,400 MPa, 10% higher than traditional E-glass.

Higher Modulus

A modulus of 72 GPa, 10% higher than traditional E-glass.

Higher High Temperature Resistance

Softening point 132°C higher than traditional E-glass, and coefficient of expansion 21% lower than traditional E-glass.

Higher Fatigue Resistance

100% higher than traditional E-glass, ensuring high reliability of finished products.

More Environment-friendly

Using 100% recycled and 100% free glass composition to ensure clean production.
